List of equipment

ECG machine
An ECG records the electrical activity of the heart. The heart produces tiny electrical impulses which spread through the heart muscle to make the heart contract. These impulses can be detected by the ECG machine.

Price: from $ 2500 - 4000 depending on the model and manufacturer

Infusion Pumps
It is used for the dozing of the medications to the child

Price vary from $ 2.000 - 3.500 depending of the manufacturer and model

Ultrasound machine
For the use in gynecology, perinatology neonatology and fetomaternal medicine. With specific probes for all this areas.

Price from Price from $ 29.000 – 46.000*
* price is depending on the number of probes and type of ultrasound machine (3D, 4D, etc.)
Delivery beds

Price from $11,000 – $15,000

I would like to sponsor this project

OB& Gyn Examination table

Price from $7,000 – $15,000

I would like to sponsor this project

Video Gastroscopy

Price from $27,000 – $35,000

I would like to sponsor this project

Ambulance car

Price $ 38,000

I would like to sponsor this project
**Neonatal Intensive Care Unit - NICU equipment**

The neonatal intensive care unit (NICU) contains many machines and other types of equipment used to care for sick babies with many different problems. These machines seem less intimidating when you understand how they can help your baby.

Each bed for NICU would need a ventilator, cardiac monitor, infusion pumps, specialised incubators and other specialised equipment ventilator (respirator), C PAP

---

**Pulse oximeter**

A small U-shaped device that's wrapped around a baby's foot or hand and secured with a stretchy bandage. It uses a light sensor to help determine whether the baby has enough oxygen in her blood. This sensor doesn't hurt your baby at all. It helps doctors and nurses determine whether your baby needs more or less oxygen, while reducing the need for painful blood tests.

Price: from $ 400

---

**C-PAP (continuous positive airway pressure)**

Air is delivered to a baby's lungs either through small tubes in the baby's nose or through a tube that's been inserted into her windpipe. The tubes are attached to a ventilator (respirator), which helps the baby breathe but does not breathe for her.

Price: vary from $ 3.000 - 4.500 depending of the manufacturer and model

---

**Fetoscopy**

The Fetoscopy permits partial the visualization of the Fetal Anatomy. This instrument with accessories and Endoscopic Video-Camera allows diagnosis/ of abnormality and intervention in early pregnancy.

Price from $ 13.000 – 30.000 depending of the manufacturer and model

---

**Laser**

The Multibeam is a new generation laser combining Dornier's proven diode technology and 940 wavelength with a new ergonomic design and advanced intuitive user interface. This laser is use in obstetrics for Twin to Twin transfusion sindroma in pregnancy, in gynecology, laparascopic surgery in gynecology,

Price from $ 49.000 - 52.000
NICU Respirator

A ventilator (also called a respirator) is a mechanical breathing machine that delivers warmed and humidified air to a baby's lungs. The sickest babies receive mechanical ventilation, meaning that the ventilator temporarily breathes for them while their lungs recover.

The air is delivered to the baby's lungs through an endotracheal tube (a small plastic tube that's inserted through a baby's nose or mouth down into the windpipe). The amount of oxygen, air pressure, and number of breaths per minute can be regulated to meet each baby's needs.

**Price from $35.000 – $47.000**

---

Incubator and warm table for premature babies

**Warm table – Radiant warmer**

An open bed with an overhead heating source that provides heat to a baby. A warmer may be used instead of an incubator if a baby needs to be handled frequently.

**Incubator**

Babies are placed in this clear plastic box, which keeps them warm and protects them from germs and noise.

**Price from $10.000 – $18.000***

*Price vary from the model and manufacturer

---

**Patient Monitors for NICU**

**Blood pressure monitor**

A machine connected to a small blood pressure cuff wrapped around your baby's arm or leg. The cuff automatically takes your baby's blood pressure at regular times and displays the numbers on a screen.

**Cardiopulmonary monitor**

A machine that tracks your baby's heart and breathing rates. It's connected to your baby by small adhesive monitoring pads placed on her chest. The monitor displays information on the screen, which can be printed onto paper. An alarm will sound if your baby's heart or breathing rate becomes too fast or too slow.

**Price from $8.000 – $15.000**
EQUIPMENT DONATION FORM

Company Name / Sponsor name ______________________________________________________________
